2025 - present

Laszlo Balazs

Cloud Devops Engineer

Email: laszlo.balazs@balastack.com

Web: <https://balastack.com>

IDBC

Senior Devops cloud Engineer

My responsibilities include **migrating on-premises environments to the cloud**, covering both planning and selected implementation phases.

I focus on task automation across various environments—such as deployments, environment provisioning, and data backup and restore—whether in **legacy on-premises** virtualized infrastructures (e.g., Windows Server, IIS) or **modern cloud-based containerized** platforms (e.g., AWS Fargate, EKS).

I contribute to the refactoring and optimization of **monitoring systems** and help develop a modern, developer-centric **DevOps strategy** that supports the entire product lifecycle—from initial business requirements through production deployment to product retirement.

Throughout all tasks, I place **strong emphasis on** maintaining clear and comprehensive **documentation**.

2016 - 2025

Extremal Element Kft

Devops Engineer

Improved clients' software development strategies with a focus on **DevOps principles**, including automating IT infrastructure to enhance operations.

Supported developer teams and **managed the integration of applications and microservices** in financial companies.

Designed and managed **CI/CD pipelines** using GitLab, Bitbucket, AWS CodeCommit, and AWS CodePipeline.

Planned AWS environments and implemented **container-based applications**.

Managed and monitored **container orchestration systems**, including Docker, Docker Swarm, Kubernetes, AWS ECS, and AWS Fargate.

Prioritized **log monitoring** with tools like ELK, Sentry, and Splunk, while ensuring security compliance using SonarQube and Trivy Scan.

Contributed to building and maintaining a **centralized knowledge base (Confluence)** to improve efficiency and reduce recurring errors.

2015 - 2016

Cascade Informatikai Zrt

System Engineer

Planned and implemented IT systems for various business needs.

Designed and managed virtualization (VMware), networking (Cisco), and storage solutions (IBM), including system deployment and installation.

Managed Linux servers (SUSE, CentOS, Debian) and parallel file systems (IBM GPFS).

2012 - 2014

Converta Kft

C# developer, System engineer

Managed **digital signature integration** into enterprise systems.

Designed and developed digitization systems (IBM Datacap, IBM FileNet private cloud) using **.NET C# and Java EE**.

Supported **digitalization processes** to enhance efficiency.

2009 - 2012

Szervizpark Kft.

Intern

Assisted in **informing employees** about electronic and digital signatures.

Helped plan and prepare **electronic signature policies**.

Maintained **contact with partner companies** and contributed to **developing business process management system functions**.
